

Abstract

System and method of automated generation of access-controlled, personalized data and/or programs, a user (10,...,14) accessing a central unit (40) via a network (30/31) by means of a communication device (20,...,24) and the access-controlled data and/or programs being transmitted to the communication device (10,...,14), logical records (421,...,423) being generated having data elements (4211,...,4214) divided according to authorization classes and the personalized, access-controlled data and/or programs being generated by means of a filter module (41) of the central unit (40) based on the authorization class of the user (10,...,14) and on the access request data of the user (10,...,14).
